

Slot-aligned alive negatives do not suppress bystander marker leakage

Per-context paired bystander mean log-prob, 16 training contexts $\times$ 2 seeds. 29 bystander columns per cell, own trained slot. Mean Legacy – Revised = -0.16 nat; $n = 31$ paired training-context $\times$ seed cells; one-sided $p \approx 0.996/0.997$ (anti-suppression).
