

Every forward pair of the Tülu-3 ladder: how much of the context→answer map survives
 median over 7 non-degenerate corpora, every corpus overplotted; open markers = point-only (round B, no bootstrap draws)

-- shuffled-pairing null, per tier (t0/t6 drawn; t7/t8 = -0.0008 ≈ the zero line) 6: reparam contexts 8: reparam both within-model ceiling (target's own map)
 ● 0: direct transfer 7: reparam answers cross: source ctx → target answer (fresh fit)
