

GCV λ -selection per fold — layer 19, context arm, judge-kept rows (instruct)

Broken cell: helpful-control persona
pooled held-out R^2 at selected $\lambda = -1.48$

GCV objective = $\text{train RSS} / (n - \text{dof})^2$

dot = GCV-selected λ

- fold 0
- fold 1
- fold 2
- fold 3
- fold 4

Healthy cell: rude persona
pooled held-out R^2 at selected $\lambda = 0.55$

dot = GCV-selected λ

- fold 0
- fold 1
- fold 2
- fold 3
- fold 4
