

Contrastive-negative knobs reduce bystander marker leakage; positive-side knobs nudge it up

Mean across held-out bystanders (23 in 9 cells; 22 in +pos-personas=2; 20 in +pos-personas=4). Error bars = 95% bootstrap CI half-width. Open circle = anchor cell (1 positive $\times$ 200 examples + 2 negatives $\times$ 200 examples). N = 1 seed (42). Qwen-2.5-7B-Instruct, contrastive LoRA SFT.
