

Trained negatives rise from the first steps — never below base

Contrastive mix, dense checkpoint grid (every 2 steps); teacher-forced probe reads, median across 6 source cells, band = IQR.
Left grey band = source onset (steps 16–20); right grey band = step-2 measurement-noise envelope (± 0.008 nats).

marker log-prob gain (trained – base, nats)

Full dense window (steps 2–60)

Zoom: the previously unobservable window
