

Persona-vector direction vs null battery — System-prompt prediction, within-prompt (controls for prompt type)

Blue = the paper's matched-trait persona vector (point + 95% bootstrap CI). Violins/points = the four nulls' max-over-28-layers $|r|$ per draw; horizontal cap = each null's 97.5th pct. The paper's direction beats a null only when the blue point sits ABOVE that null's cap.
