

The cross-arm contrast survives every measurement choice; the magnitude half of the rank-one law fails its planned test in both arms

mean cosine(persona shift, top direction)

(a) Which text the models are read on
(3 lines = 3 seeds per arm)

(b) Top directions are seed-stable within
each arm, near-orthogonal across arms

(c) No consistent magnitude law on the planned
read (trained text; 14 personas per dot, 3 seeds)
