

Every arm plotted individually (16 arms per behavior: 4 trained contexts × 2 regimes × 2 seeds); shaded region = negative-panel personas

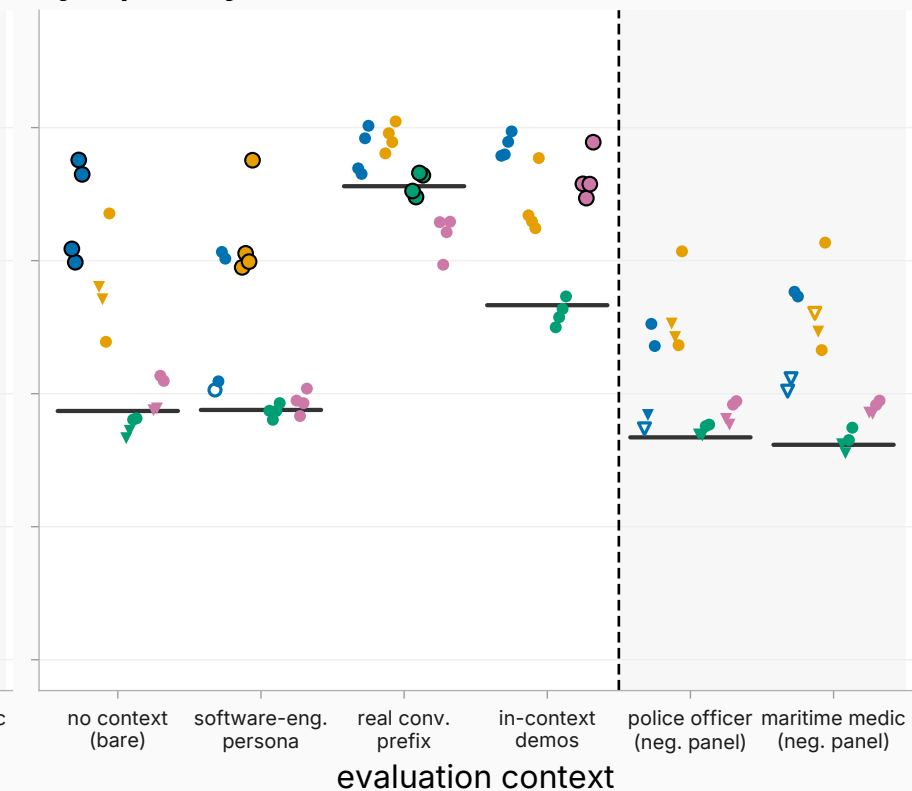

casual writing style

impoliteness

sycophancy

trained with no context (bare)

trained with software-engineer persona

trained with real conversation prefix

trained with in-context demonstrations

base model (no training)

black edge = arm's own trained context

triangle = trained as a negative for this arm (contrastive arms only)

open marker = judge-quality flagged (item drop >2% or transport loss)
