

Dropping $\text{lr } 1\text{e-5} \rightarrow 5\text{e-6}$ shifted the E=1 wrong-slot read up by ≈ 2 nats — still not enough to clear the band on all 3 arms

Marker log-probability under the wrong persona's encoding. Lower = less leakage. Solid = this run at $\text{lr}=5\text{e-6}$, errorbars = 95% bootstrap CI over 5 seeds, $n=50$ questions each. Dotted = parent #529 at $\text{lr}=1\text{e-5}$, means only.
