

Does the source context vector live in the top-k right-singular subspace?
 projection energy onto the top-k right-singular subspace of the stacked q/k/v update, band mean L14-L24, module-input space

context-vector energy captured

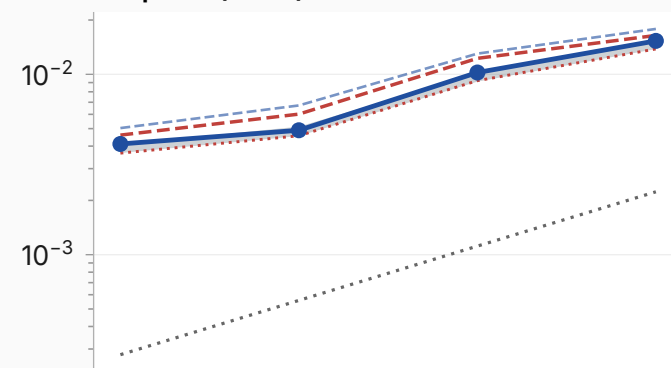

shallow dial (#527)

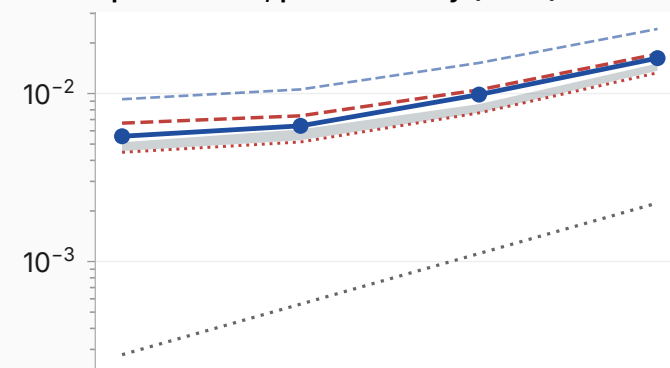

mid dial (#550)

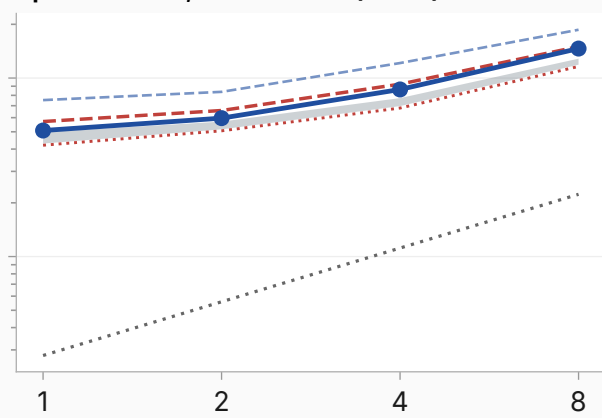

deep dial (#538)

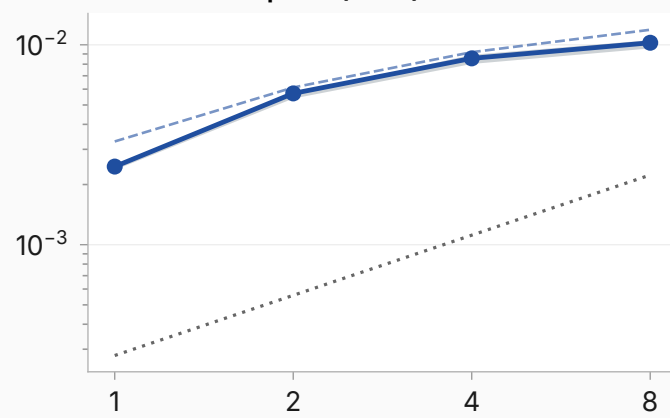

epoch ladder, positives-only (#474)

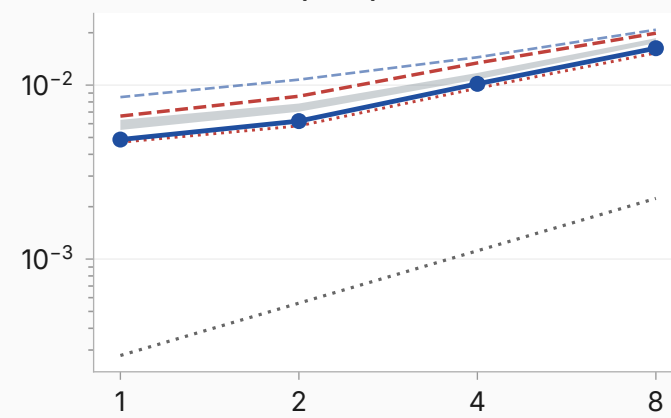

epoch ladder, contrastive (#474)

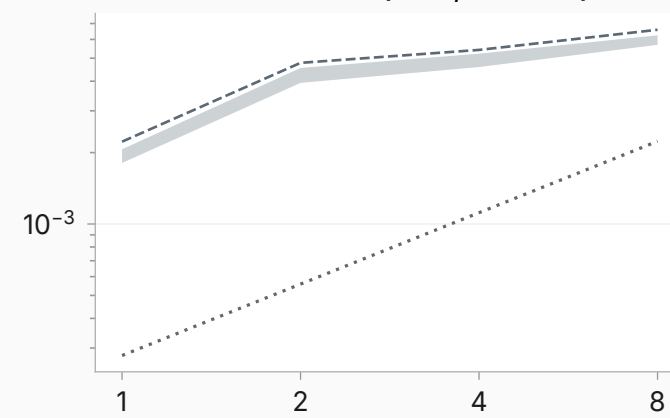

saturated endpoint (#519)

cross-behavior (#518)

EM no-source control (#521, scale ref)

key-subspace size k

wrong-context null (p50-p95) matched source (median)
 shuffled-pairing null p95 matched source (max cell)
 shuffled-pairing null p50 random-vector floor k/3584

key-subspace size k
 whole-bank read (p50-p95)
 whole-bank max

key-subspace size k
