

What survives controlling for firing rate + logit-footprint:promoting + content-type:topic?
hollow = pooled (no control) · filled = all three controls · grey band = $|c - 0.5| < 0.02$ (indistinguishable)

n = 120,716 features · retained-pair fraction 0.065 under all three controls (40 cells). The two control factors are excluded as candidates: a factor is constant inside its own stratum.
