

Per-arm rank correlation with leakage

Across all three source arms, the bystander's own prior dominates; proximity adds little

Error bars = 95% cluster-on-persona bootstrap CI, $n = 14$ personas $\times$ 3 seeds per arm

Joint regression — prior carries the predictive weight

Across all three source arms, the bystander's own prior dominates; proximity adds little

Error bars = 95% cluster-on-persona bootstrap CI, $n = 14$ personas $\times$ 3 seeds per arm
