

Matched-install leakage contrast is opposite-signed across sources

Per-source on-policy–canned bystander leakage; 95% cluster bootstrap CIs; grey band = registered ± 0.03 null

contrast: on-policy minus canned (agreement-rate change, trained – base)

← on-policy leaks LESS on-policy leaks MORE →

- matched install (clean read)
- on-policy never reached canned install (dose-confounded)
- pooled across sources
