

DeepSeek-V3.1-Base · Fred

Persona similarity vs. published character-tracer uptake

Raw cosine

Uncentered whitened cosine

x: cosine(Fred, labeled character), using persona-mean context vectors. y: that character's tracer uptake under Fred.

Five character conditions per panel. Full-bank fit; no mean subtraction. Blocks are zero-based; x-axis ranges vary by panel.

Whiskers show digitization bounds (± 0.34 percentage points), not sampling CIs. HHH/Fred y-axis ranges differ.

DeepSeek geometry is from before story fine-tuning; published behavior is from after fine-tuning.
