

Qwen3.8-27B · Fred

Persona similarity vs. published character-tracer uptake

Raw cosine

Uncentered whitened cosine

x: cosine(Fred, labeled character), using persona-mean context vectors. y: that character's tracer uptake under Fred.
Five character conditions per panel. Full-bank fit; no mean subtraction. Blocks are zero-based; x-axis ranges vary by panel.
Whiskers show digitization bounds (± 0.34 percentage points), not sampling CIs. HHH/Fred y-axis ranges differ.
Qwen geometry is compared with the paper's DeepSeek behavior; Qwen leakage was not measured.
