

Marker behavior (separate scale: log-probability, not a judge rate) — 16 dose-matched selected arms; short bar = mean of 4 arms; black line at 0 = base model

marker log-probability, trained - base (nats)

● trained with no context (bare)

● trained with software-engineer persona

● trained with real conversation prefix

● trained with in-context demonstrations

— base model (no training)

● black edge = arm's own trained context

▼ triangle = trained as a negative for this arm (contrastive arms only)
