

Per-token trajectory needs the uploaded by-token CSV

No token-level values were reconstructed in the network-isolated analyzer sandbox

The required HF artifact `target_logprobs_by_token.csv` is uploaded, but the local sandbox cannot resolve `huggingface.co`. This panel is a provenance marker, not a substitute for the raw per-token plot. No token-level values were fabricated.

Use the HF tree at commit `65cca1fb` to regenerate this figure.

Raw CSV: HF data commit `65cca1fb/issue360_target_logprobs/target_logprobs_by_token.csv`
