

Within-source cosine gradient on the in-band marker log-prob delta, per source

One point per bystander persona (n = 23 per panel); y error bars are per-cell SE over 50 probes. Cosine measured on the base model. Dark red = within-source Spearman rho significant (permutation p < 0.05); grey = not significant. Rho + p from the committed h1_h2_analysis.json. Descriptive read — not part of the registered concordance test.
