

Paired gap $d = (\text{system arm}) - (\text{role arm}), \text{ nats}$

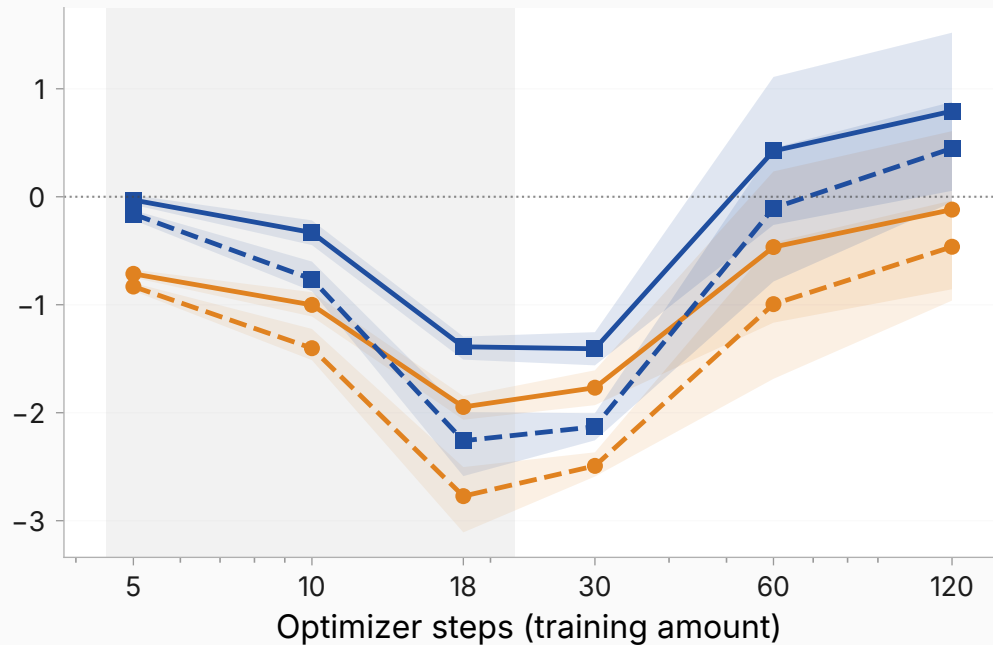

Same data, two read-out spaces

trained log P (the parent DV) vs trained – base EOS-margin (this re-read), at the wrong-persona probe.

Trained on pirate

Trained on villain

task #533 logit-margin-reread, $n=5 \text{ seeds} \times 50 \text{ questions per point}$

—●— log P, plain contrast

—■— EOS-margin, plain contrast

—●— log P, padded contrast

—■— EOS-margin, padded contrast
