

On sycophancy, signal lives at early-to-mid layers across both extraction points; the parent's late-layer ridge is flat

Grey vertical band = layers 19-24 (the parent's winning band). Shading = 5000-rep cluster bootstrap 95% CI (sycophancy only; fact arm in smoke). Dotted = -0.40 reference; dashed = -0.58 (parent's non-stylized anchor).
