

Transport agreement — donor-null arm (in-design control: donor payload); shared color scale across arms

banked map layer (left of divider: context->answer map m779; right: prefix->answer map m1738)

900 degenerate-by-design self-transfer rows (matched-prefix x prefix-end, all doses; open circles — no cosine in the artifact) excluded; pooled over vector types A+B and rollouts; direction-only agreement (norms not compared).
