

Per-persona bystander leakage slope across the three dial points

Slope = how fast each held-out persona's median log P(marker) shift climbs with the dial. Bystander-only reads (source-persona reads excluded).

Per-persona median log-prob shift over true-bystander joint cells; slope = (deep – shallow) / (deep landing – shallow landing) at sweep-side median landings 5.89 → 9.81 → 17.24 nat.
