

Behavior-expression spread against the pre-registered gate (SD >= 10 AND < 80% bottom bin)

Both panels per behavior are the two conditions of the same pre-registered gate; a setting passes only if BOTH hold.
Hatched bars are hallucination's own rungs, whose 0-1 fabrication rate is rescaled x100 onto the gate's scale — a DIFFERENT construct from the graded trait score, not comparable to the solid bars beside it.
