

Trained negatives rise from the first steps — no meaningful below-base dip

Contrastive mix, dense grid (every 2 steps); teacher-forced probe reads, median across 6 source cells, band = IQR; grey span = source onset (16–20).

Inset: steps 2–8 at noise scale — the two step-2 sub-zero medians sit inside the resampled negative-group-median envelope (dark = IQR, light = 5th–95th pct).

marker log-prob gain (trained – base, nats)

Full dense window (steps 2–60)

Zoom: the previously unobservable window
