

Bystander-slope vs persona-distance (min over sources)

If Finding 3's slope ordering reflects source-persona generalization, distance and slope should be **NEGATIVELY** rank-correlated.

- Source persona (other pair only)
- Source-adjacent (medical / security / investigation)
- Semantically distant
- Default assistant

Spearman $\rho = -0.181$ $p = 0.459$ $n = 19$
