

Persona-vector direction vs null battery — corrected 8-prompt ladder (the paper's trait-inducing prompts)

Blue = the matched-trait persona vector. Violins = per-draw max-over-28-layers $|r|$ for the shuffled-permutation / norm-matched-random nulls (1000 draws); points = the fixed cross-trait / PCA top-5 directions; horizontal cap = each null's 97.5th pct. The vector beats a null only when blue sits ABOVE that cap.
