

# EOS-margin shift vs base margin — shift-invariant logit readout

Trained - base EOS margin  $\Delta(z(*) - z(\text{EOS}))$

Raw Spearman  $\rho = -0.641$  [95% CI -0.762, -0.477]

Partial  $\rho$  ( $|\text{min\_dist}, K$ ) = -0.417 [95% CI -0.544, -0.269]

Base-model EOS margin  $z(*) - z(\text{EOS})$  at post-response slot
