

On fact, the bake-off underperforms #494's coarse predictors and collapses under #500's prior control

Even the bake-off's search-best cell (out of ~950 candidates) drops from $|\rho|=0.67$ to $|\rho|=0.03$ once the bystander's own prior on the fact is partialled out.

#509 fact-arm scoring.json (smoke; reliability_y=1.0 fallback; n=18 substrate-FE cells). Coarse anchors carried in via #494's regression_data.csv; double-FE residualizes substrate + bystander_logprob per #500.
