

The map collapses when the assistant is a story character (instruct, context arm, layer 19)

Within-regime held-out R^2 with 95% bootstrap CI (Qwen2.5-7B-Instruct). Chat sits ~ 0.65 (above baseline); the assistant rendered as a story character sits at -0.75 , below zero — worse than predicting the mean (its own shuffle-null is off-scale at ~ -2.2).
